### 8.2 Exposure Controls

**Hygiene Measures**: The usual precautionary measures for handling chemicals should be followed.

**Eye / Face Protection**: Not required.

**Skin / Hand Protection**: The glove material has to be impermeable and resistant to the product / the substance / the preparation. Due to missing tests no recommendation to the glove material can be given for the product / the preparation / the chemical mixture. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation. The section of the suitable gloves does not depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove cannot be calculated in advance and has therefore to be checked prior to the application. The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

**Respiratory Protection**: Not required.
